

# Beacon 25 Operation During Period of 2020-06-01 to 2020-09-01

## Introduction

The following presentation is a summary of the Beacon data from the study period indicated above.

## Sensor Data

### Total Volatile Organic Compounds

The TVOC values and reliability are summarized below

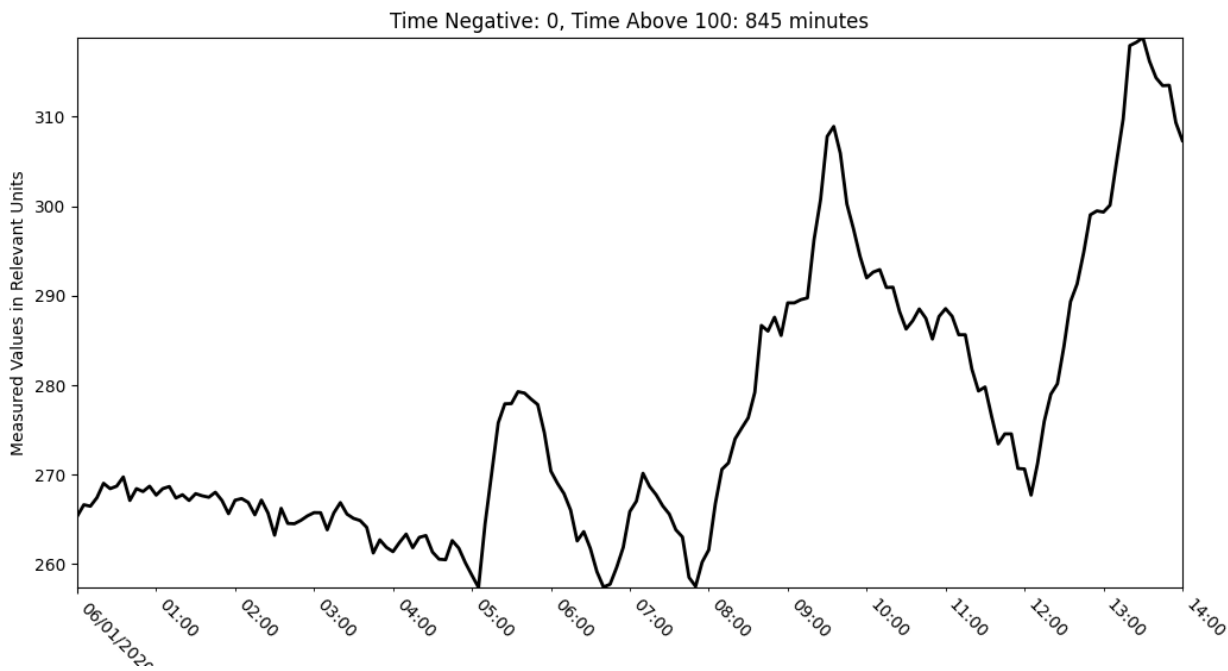

Figure 1.1 TVOC timeseries data with units of parts-per-million during the study period

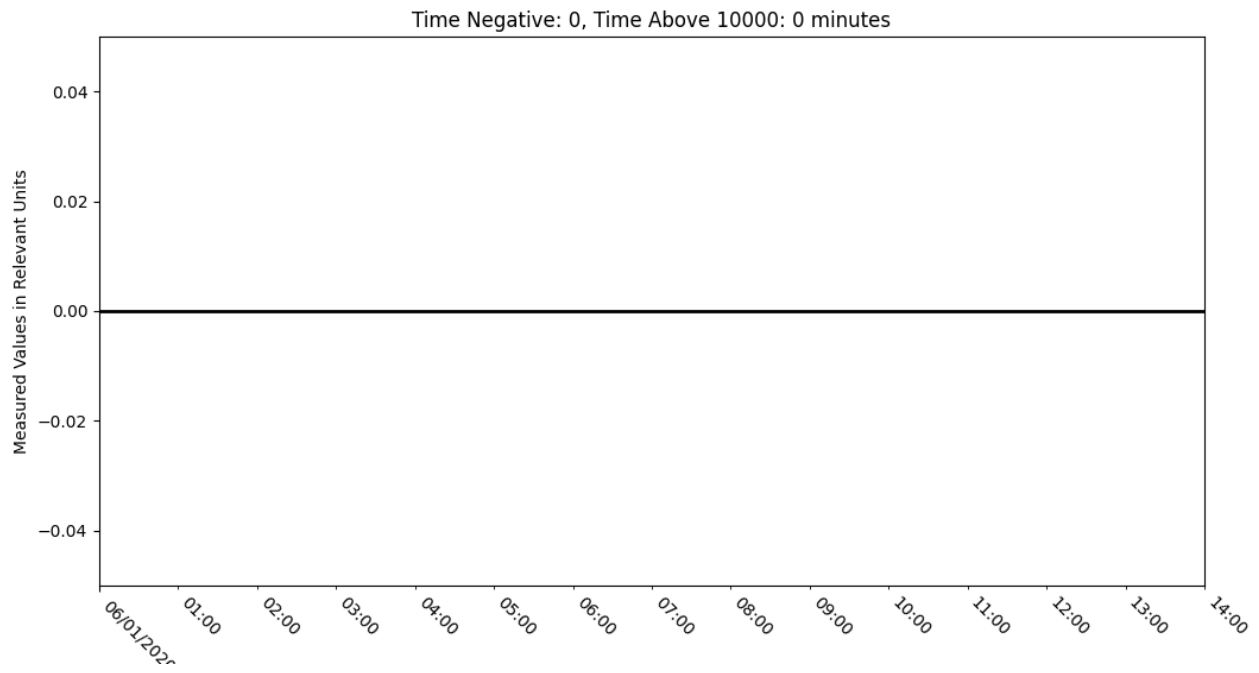

Figure 1.2 Reliability of the TVOC sensor during the study period

### Light Levels

The light level values and reliability are summarized below

**Figure 2.1** Light level timeseries data in units of lux during the study period

**Figure 2.2** Infrared levels during the study period

**Figure 2.3** Reliability of the light sensor during the study period

## Nitrogen Dioxide

The NO<sub>2</sub> values and reliability are summarized below

**Figure 3.1** NO<sub>2</sub> timeseries data with units of parts-per-billion during the study period

Figure 3.2 Reliability of the NO2 sensor during the study period

## Carbon Monoxide

The CO values and reliability are summarized below

Figure 4.1 CO timeseries data with units of parts-per-billion during the study period

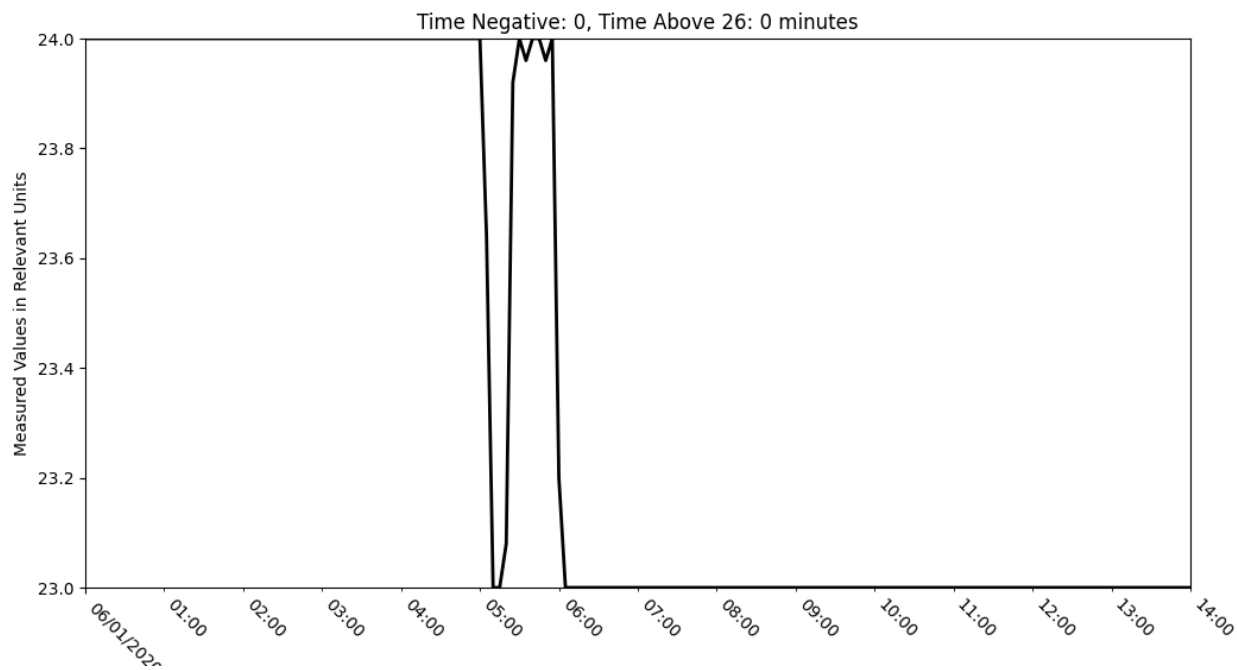

**Figure 4.2** Reliability of the CO sensor during the study period

## Temperature

The temperature values from three various sensors and reliability are summarized below

**Figure 5.1** Temperature timeseries data in units of Celsius during the study period by the Sensirion SCD30 sensor

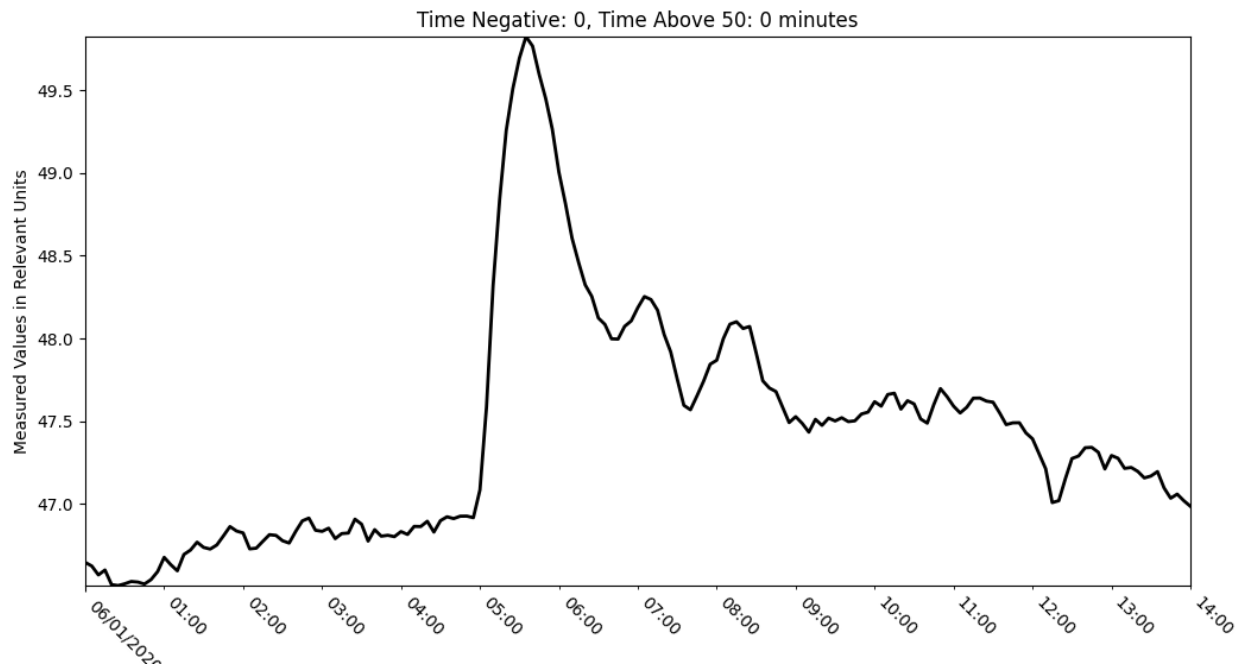

**Figure 5.2** Temperature timeseries data in units of Celsius during the study period by the DGS-CO sensor

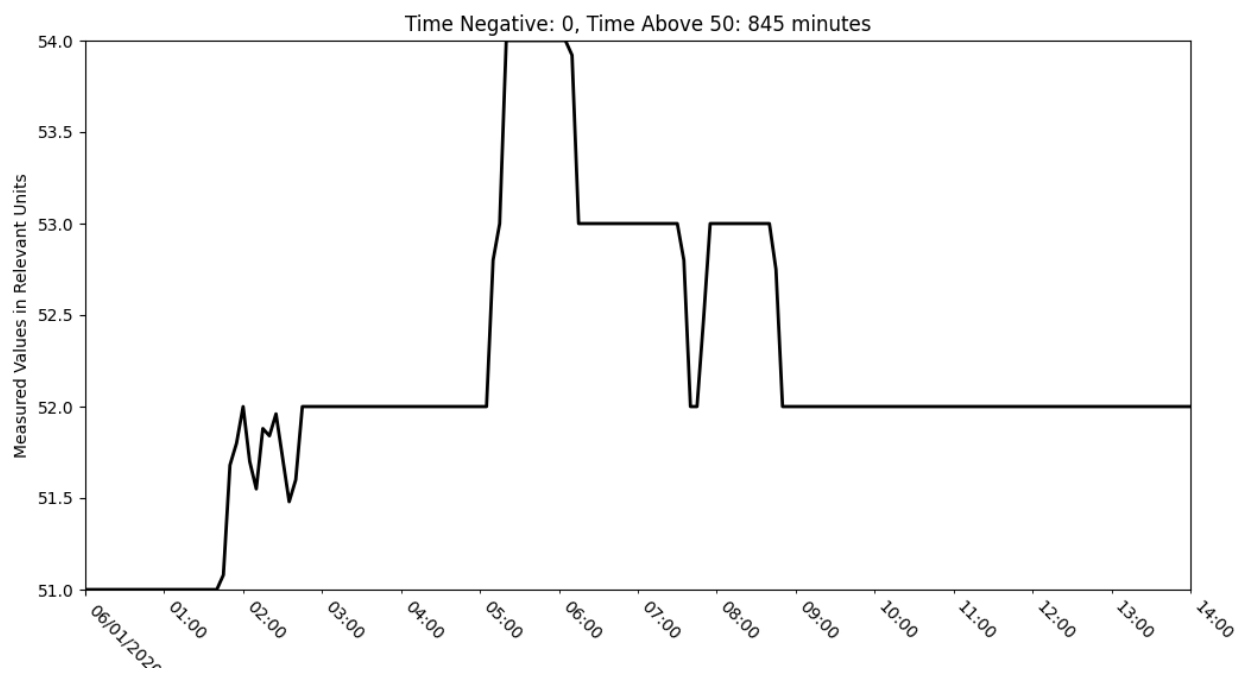

**Figure 5.3** Temperature timeseries data in units of Celsius during the study period by the DGS-NO2 sensor

## Relative Humidity

The RH values from three various sensors and reliability are summarized below

**Figure 6.1** Relative humidity timeseries data during the study period by the Sensirion SCD30 sensor

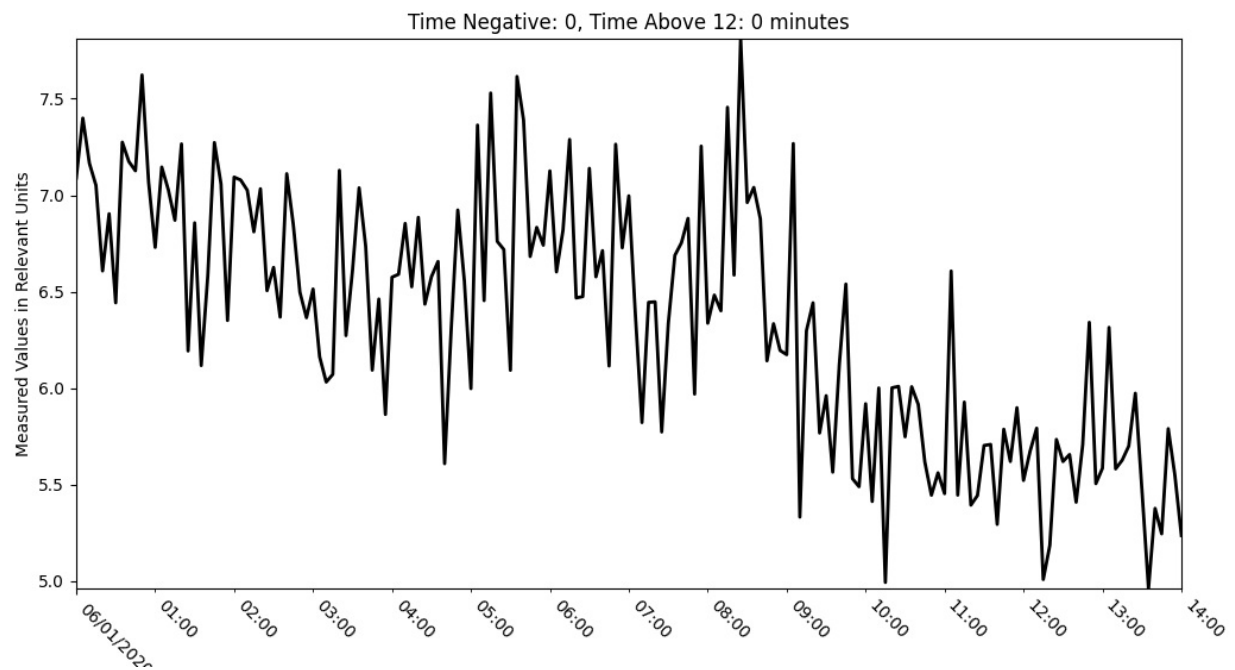

**Figure 6.2** Relative humidity timeseries data in units of Celsius during the study period by the DGS-CO sensor

**Figure 6.3** Relative humidity timeseries data in units of Celsius during the study period by the DGS-NO2 sensor

## Particulate Matter

The Particulate Matter values (PM1, PM2.5, and PM10) and reliability are summarized below

**Figure 7.1** PM1 Timeseries data with units of micrograms per cubic metter during the study period

**Figure 7.2** PM2.5 Timeseries data with units of micrograms per cubic meter during the study period

**Figure 7.3** PM10 Timeseries data with units of micrograms per cubic meter during the study period

**Figure 7.4** Reliability of the PM sensor (using PM2.5 values) during the study period
